M.B.A. (Part-I) (Semester-I) Examination, 2013
MATHEMATICS AND STATISTICS FOR MANAGEMENT
(Paper - III)
Sub. Code : 48322

Day and Date : Friday 31-05-2013

Total Marks : 70

Time :10.00 a.m. to 1.00 p.m.

- Instructions :**
- 1) Question numbers 1 and 5 are compulsory.
 - 2) Attempt any two questions from the remaining question numbers 2 to 4.
 - 3) Figures to the right indicate full marks.
 - 4) Use of non programmable calculator is allowed.

Q1) a) i) Evaluate

$$1) \lim_{x \rightarrow 1} \left[\frac{2}{1-x^2} + \frac{1}{x-1} \right] \quad 2) \lim_{x \rightarrow 0} \left[\frac{x}{\sqrt{x+a} - \sqrt{a}} \right]$$

- ii) Find the minimum average cost, if the cost function is given by
 $C = 36x - 10x^2 + 2x^3$

- b) State the relationship between correlation coefficient and regression coefficient and verify them by using following data.

X	2	3	4	7	6
Y	10	7	3	1	2

[10+10]

Q2) a) i) Find $\frac{dy}{dx}$ for the following

$$1) y = \frac{x^2 + 1}{x^2 - 1} \quad 2) y = (x^2 + 2x + 3)^{5/2}$$

- ii) Define Time Series and state its components. Compute three yearly moving averages from the following data.

Year	2004	2005	2006	2007	2008	2009	2010
Sale	14	15	10	8	9	11	12

b) Define inverse of a matrix. Show that the inverse of matrix

$$A = \begin{bmatrix} 2 & 1 & 3 \\ 3 & 1 & 2 \\ 1 & 2 & 3 \end{bmatrix} \text{ exists and find its inverse.}$$

[8+7]

- Q3) a)** i) Find the polynomial function of the lowest degree, if $f(0)=8, f(1)=11, f(4)=68, f(5)=123$.
 ii) Find the compound interest on the sum of Rs. 7865 for 4 years at $3\frac{1}{2}\%$ p.a.

b) Define square matrix. If $A = \begin{bmatrix} 5 & 4 \\ 4 & 3 \end{bmatrix}$, $B = \begin{bmatrix} -3 & 4 \\ 4 & -5 \end{bmatrix}$ then show that $AB=BA$ and AB is a non-singular matrix.

[8+7]

- Q4) a)** Define Coefficient of Variation [C.V.]. Following data gives number of catches taken by Tendulkar and Dhoni. Find out who is consistent in taking the catches?

Catches taken by Tendulkar	4	5	4	3	5
Catches taken by Dhoni	1	0	4	2	1

b) State the equations of two regression lines.

From 10 observations on price(X) and supply(Y) of a commodity the following data were obtained.

$$\sum X = 130, \sum Y = 220, \sum X^2 = 2288, \sum XY = 3467$$

Compute the equation of the line of regression of Y on X and estimate the supply when price is 16.

[8+7]

Q5) Attempt any Four:

- a) Define Index number. Calculate price index number by using
 i) Simple aggregate method ii) Simple average of relative method

Commodity	A	B	C	D
Base year price	2	4	10	50
Current year price	3	5	12	60

- b) Define Correlation. Interpret, if (i) $r=+1$, (ii) $r=-1$, (iii) $r=0$, where r is correlation coefficient between two variables.
 c) Explain the construction of control chart. State the uses of S.Q.C.
 d) Solve the following equations by Cramer's rule.

$$4x-3y = 17, 5x+y = 7$$

- e) If $A = \begin{bmatrix} 2 & 1 \\ 1 & 3 \end{bmatrix}$, find a matrix X such that $AX=I$, where I is unit matrix.

- f) Define S.D. Calculate mean and S.D. for the data given below.

Class	0-10	10-20	20-30	30-40	40-50
Frequency	7	12	24	10	7
